and the second s	and a stand or addition to the test to be the test
Q	How to get better out of Numpy
1.	Conwit Python loops and conditional logic into
	average or boolean average operations.
2.	use Broad casting when cluve possible
3.	use away wells or away strong to ausid
	copying data and avoiding oduce computation.
	the state of the s
4.	utilize utunes and utune methods
	they we fast and optimized and developed for
	this purpose too.
	e de la contraction de la cont
5.	en cook of sophisticated logic and higher looping
	algorithm use Numba library which uses
44.	JIT and thus own code fast and chicently.
	JIT and thus wun code fastiand ethochty.
